Tutorial:

On-boarding: The on-boarding screen asks the user whether they would like to use the application in the Simplified Chinese language. However, the default language is English. The user clicks "Start Logging" and is directed to the Profile Tab with their preferred language.

Profile Tab: This page shows the general information and statistics about the user. It shows their average glucose, average carbohydrates, and their average blood pressure. This page also displays the user's name and email, along with their healthcare practitioners email address.

Edit Profile Tab: In case the user wishes to edit the information displayed in their profile tab, they can click the "✏" circular button with the red background. This directs to an "Edit Profile" page that allows the user to edit their Name, Type of Diabetes, Email and also their Healthcare Practitioners email.

History Tab: This page displays all of the past log's that the user has logged. To add a new log, click the "+" button on the top right. To view more details about a log, click the log on the table itself.
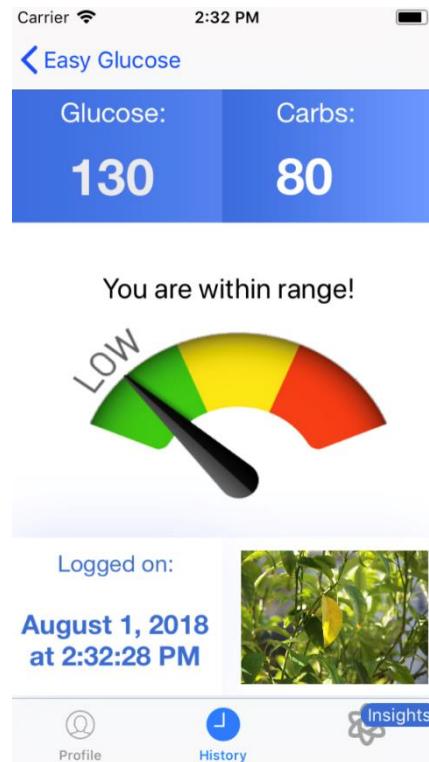

Log Details: This page is presented upon clicking a specific cell from a table. This shows us more details about the specific glucose log. The details include the "Logged on" time and the photo of the meal that was logged.

Add Log: This page is displayed after clicking on the "+" on the History tab. This page allows the user to log their glucose input, notes, carbs and blood pressure along with their meal photo. The application saves this information in the database.

Insights Tab: The Insights tab displays all the glucose logged data in the chart format. The data can be sorted in the chart with many different options. The meal time filter allows the user to filter their Before, After, or Both logs. Upon selecting one of the meal time filters, the user is required to click one of "7 days", "30 days", "90 days" or "all time" date sorting options.
This refreshes the chart with the desired values.
